Quarterly service review

Platform team, third quarter

This quarter the platform team cut median latency by a third and kept the error budget intact. The summary below covers latency, reliability and the work planned for next quarter.

Median latency by month

July: 420 ms

August: 340 ms

September: 280 ms

Details and the full table are in the appendix on page 3.

Reliability

The service met its availability target in every month. The longest incident lasted 14 minutes and came from a configuration change that was rolled back.

The incident review is published on the engineering reviews page.

Next quarter

We plan to lower latency further, move the batch jobs to the new queue, and retire the legacy export. Each item has an owner and a date in the team plan.

Appendix: latency measurements

Month	Median	95th percentile
July	420 ms	910 ms
August	340 ms	760 ms
September	280 ms	640 ms

Latency is measured at the edge and includes network time to the first byte.
